

# Online medication platform substitutue real Doctors

# Background of the study

- The number of online medication platforms are really growing at a very fast rate all over the world
- A limited number of the platforms have the pharmaceutical legitimacy verification, long-term follow-up, longevity and patient safety, amongst the platforms sell medicine without a valid medical prescription or counterfeit drugs.

# Statement of research problem

- Online medication platforms are classified as “rogue”, since they violate the professionalism, this is because they give out a wrong medication to patients.

# purpose of the study

- A large number of population have access to the internet, where it has really helped in most of the activities, in terms of applications, registrations, knowledge and even health sectors.
- For this study, I specialised on Medications provided via the internet. A large percentage of people are not satisfied with the medical treatment they get from different platforms.
- Due to wrong medication provided by the platforms have led to serious poor health status. Most of the platforms give totally different suffering after giving the signs and symptoms.
- Most of the platforms are after business, they only want to benefit. This brings the question, can real doctors substitute the real doctors? who have a long-term follow-up, professionalism and patient safety.

# Objective of the study

- General objectives  
To select and evaluate the online medication platforms, so as to identify indicators of professionalism and the medication safety.
- Specific objectives  
To determine how the platforms diagnose and how they analyse the information given as the signs and symptoms on the technology sector (Data science)

# Research questions

- Do the platforms diagnose and analyse the information given as the signs and symptoms on the technology sector(Data science)?

# significance of the study

- A large number of population have access to the internet and they prefer getting medications online. It has really helped in terms of saving time, since they get medications online and deliveries at their suitable places. This study will help patients to get the right medications through the platforms.

# Thank you!!
